

## HEAT PUMP TAKES THE OIL OUT OF BOILER!

Four years ago when a Stronggrove Hill resident got fed up with his 20-year old oil central heating boiler's costs and the need for log-powered wood stoves to keep the house warm, he invested in an Air Source Heat Pump (ASHP) and some additional radiators.

For the last 4 years he hasn't had to worry about boiler repairs, oil deliveries or log buying and lugging – he has just enjoyed a trouble-free and warm house that saves him £1,250 every year at today's prices.

David adds "My Finnish-made heat pump was designed to work in much colder winters than we have in Hungerford so it handles the heating of my 3-bedroom, 275 years old cottage with ease."

"My only regret was not paying the additional cost in 2018 of connecting the heat pump to the hot water tank to also heat the hot water - if I had my hot water heating costs would be now be cut by two-thirds!"

"Unfortunately, I went for the initially cheaper option of continuing to heat the water using an off peak timer and immersion heater."
